

Chinmay Betageri

Full-Stack Developer | React | Node.js

◇ 78488 95581 ◇ kbchinmay004@gmail.com ◇ Portfolio ◇ [Linkedin/chinmay-betageri](#) ◇ [github/chinmay42010](#)

SUMMARY

Computer Science Engineer specializing in AI & ML with hands-on experience building full-stack and real-time backend systems using Node.js, Express.js, React, MongoDB, and PostgreSQL. Demonstrated expertise in custom algorithm design, WebSocket optimizations, and API integration. Seeking entry-level Backend / Full-Stack Software Engineering roles.

TECHNICAL SKILLS

Languages & Technical Skills: JavaScript, TypeScript, Python, C++ | React, HTML5, CSS3, Tailwind CSS

Backend & Databases: Node.js, Express.js, REST APIs, WebSockets, Zod | PostgreSQL, MongoDB, MySQL, Drizzle ORM

Tools & Concepts: Git, GitHub, Postman | CICD, Hosting, Monitoring, Microservices, Docker

PROJECTS

Smart Expense Tracker | [GitHub Repo](#) | [Live URL](#)

July 2026 – Aug 2026

React, Node.js, Express, MongoDB Atlas, Supabase Auth, Recharts

- Engineered full-stack application (React + Vite frontend, Node.js/Express backend, MongoDB Atlas) with Supabase authentication for users, enabling secure sing-in across platforms.
- Designed and implemented a custom debt-settlement algorithm that nets group balances and generates the minimum set of repayment transactions via greedy matching.
- Built a REST API for expenses and groups, adding CRUD, category filtering, CSV export, and budget alerts; visualized spending with Recharts and a custom CSS system.
- Deployed frontend on Vercel and backend on Render, resolving cross-platform environment configuration and case-sensitive module resolution on Linux hosting.

Sportz – Live Sports Scoring & Commentary | [GitHub Repo](#) | [Live URL](#)

Aug 2026 – Sept 2026

React, Vite, Node.js, Express, WebSocket, PostgreSQL, Drizzle ORM, Zod, Arcjet

- Built a WebSocket push layer with per-match subscription rooms for live cricket scores, reducing unnecessary payloads by implementing change detection and broadcasting only when scores update.
- Added change detection before broadcasting so the server only pushes when the score actually changes, plus heartbeat and auto reconnect on the frontend.
- Designed tiered polling across 2 rate-limited cricket APIs (refreshing live matches every 5 min, scorecards every 90 min) with quota guards to operate within free tier limits.
- Secured and deployed the stack on Vercel and Render with Zod validation, parameterized queries, locked down CORS, and Arcjet bot detection and rate limiting, verified with live testing.

EXPERIENCE

ASPL Arctictern Pvt. Ltd. – Computer Vision Intern

Jan 2026 – May 2026

- Annotated multi-modal LiDAR and image datasets over a 5 month internship, preparing high quality data for ADAS perception model training, producing precise 3D bounding boxes for pedestrians, cyclists, and vehicles across a five stage QA pipeline while maintaining 85%+ accuracy per stage as validated by senior annotators using Understand.ai (dSPACE).

EDUCATION

- B.E. Computer Science (AI & ML) | KLS Vishwanathrao Deshpande Institute of Technology, Haliyal (2023 - 2026) | **CGPA: 8.0**

CERTIFICATIONS

- Web Development Fundamentals – IBM SkillsBuild
- Building RAG Apps Using MongoDB – MongoDB University
- Claude 101 by Anthropic – Anthropic Skilljar
- AWS Cloud Practitioner Essentials – AWS Skillbuilder
