SUMMARY

Full stack developer (Node.js, Express, MongoDB, PostgreSQL, React, Next.js) who has built a double-entry payments API and a realtime sports scoring platform. Computer Science Engineering (AI & ML) graduate, class of 2026.

TECHNICAL SKILLS

Languages & Technical Skills: JavaScript, TypeScript, Python, C++ | React, Tailwind CSS

Backend & Databases: Node.js, REST APIs, WebSockets | PostgreSQL, MongoDB, Mongoose

Tools & Security: Git, GitHub, Postman | CI/CD, Docker, Nodemailer, JWT, Bcrypt, Zod Validation

PROJECTS

Backend Ledger & Payments API | [GitHub Repo](#) | [Live URL](#)

Aug 2026 – Oct 2026

Node.js, Express, MongoDB, Mongoose, JWT, Bcrypt, Nodemailer

- Built a money-transfer API where balances are derived from an immutable double-entry ledger every transfer writes one debit and one credit that are never updated or deleted.
- Made transfers atomic using MongoDB multi-document transactions: a debit and its matching credit either both commit or both roll back.
- Added idempotency keys with a unique index to block duplicate transfers on retry.
- Implemented JWT authentication with logout token blacklisting and email notifications via Gmail OAuth; shipped an interactive browser playground to test every endpoint.
- Deployed on Render with full API documentation (Postman collection + step-by-step guide).

Sportz – Live Sports Scoring & Commentary | [GitHub Repo](#) | [Live URL](#)

June 2026 – Aug 2026

React, Vite, Node.js, Express, WebSocket, PostgreSQL, Drizzle ORM, Zod, Arcjet

- Built a realtime sports scoring platform consuming two rate-limited cricket APIs with tiered polling live matches every 5 min, scorecards every 90 min and quota guards to operate within free-tier limits.
- Cut WebSocket payload volume via change detection: the server broadcasts only when a score actually changes; frontend has heartbeat and auto-reconnect.
- Secured the stack with Zod validation, parameterized queries, locked-down CORS, and Arcjet bot detection with rate limiting; deployed on Vercel and Render, verified with live testing.

EXPERIENCE

ASPL Arctictern Pvt. Ltd. – Computer Vision Intern

Jan 2026 – May 2026

- Produced 3D bounding-box annotations (pedestrians, cyclists, vehicles) for ADAS perception model training across a five-stage QA pipeline, maintaining 85%+ accuracy per stage as validated by senior annotators (Understand.ai / dSPACE).
- Maintained annotation records across QA stages to ensure traceability; flagged discrepancies for review and re-annotation wherever accuracy fell below threshold.

EDUCATION

- B.E., Computer Science (AI & ML) — KLS Vishwanathrao Deshpande Institute of Technology
2023 – 2026 | **CGPA: 8.0**

CERTIFICATIONS

- Web Development Fundamentals – [IBM SkillsBuild](#)
- AWS Cloud Practitioner Essentials – [AWS SkillBuilder](#)
- Building RAG Apps with MongoDB – [MongoDB University](#)
